

## Control System Programming

*Factory trained for AMX and Crestron Systems*

AV TechSource programmers have years of experience with AMX and Crestron control systems. We are factory trained and certified by both of these companies and are one of only two Midwestern firms to attain the elite AMX Valued Independent Programmer status.

We offer our programming services mainly on an outsource basis for AV integrators and contractors, but if you're a corporate or educational buyer, we can program your system and help you with hardware and software through our network of strategic dealer alliances.

We are also factory trained to program and support a number of other AV/IT convergence products, including Tandberg and Polycom videoconferencing systems, plus ClearOne, Polycom and Biamp digital signal processors.

### Our system programming services include

- Control systems programming
- Touchpanel design and layout
- On-site commissioning of system controls
- Remote AV system monitoring via AMX Meeting Manager or Crestron RoomView and XPanel
- Troubleshooting and service of older or problematic control systems
