

Who we are

Problem solving is what we do best at CAVCOMM.

We specialize in the design and installation of audio and video systems for the most difficult acoustical and architectural spaces.

Whether you're in charge of an historic cathedral, a corporate auditorium or a simple classroom, we have the experience and expertise to make your AV system work well and keep working.

And, if you should ever have a problem, we offer on-site service, maintenance contracts and loaner equipment . We can also provide referrals for specialists in everything from acoustical enhancement to historic preservation and renovation.

We're ready to work with you to help you build YOUR system.

Call us any time.
We're ready every time.

Whatever your needs

Whether your facility needs a basic video, sound, or lighting system or the most complex combination of AV, lighting and integrated control, we can build it. Your new system will work as one system—logically put together and easy to use the way you want it to function.

From simple systems that a volunteer can operate to complex control interfaces for the professional user, CAVCOMM's Integrated Solutions Group will deliver a system that will provide consistent performance for years to come. We've built systems for audio-visual control rooms, outdoor projection, church AV, basic auditoriums, gymnasiums and everything in between.

Our engineers and installers, with literally thousands of hours of experience and education, have hundreds of systems in their resumes in some of the most impressive installations in the upper Midwest. And we'll do the same for you—every time.

In•te•gra•ted
-adjective

1. to join disparate elements to create a whole

Computer modeling

Every installation presents its own unique set of challenges. Is there an existing system that must be removed or improved? Is the space already in use? Are there new sight-line considerations or acoustical issues which must be resolved? Are there aesthetic elements that will require an unobtrusive solution?

In our business, as in anything, the key to solving any problem is to first understand the problem. That's why at CAVCOMM, we meet with every client, then do an engineering analysis and acoustical model—on the one hand to understand the physical space, but also to see how you and your staff see it, how you use it and how you hope the system will come to serve your needs. We take pride in every one of our systems, but our primary goal is to make the system yours.

And once it is yours, we make sure you know how to use it. Our staff includes some of the finest trainers in the industry. We can teach your staff on site with plenty of hands-on time. We can prepare instruction manuals, reference guides (even translate your manuals into other languages) to make sure you can use your system whenever you need it—every time.

So•lutions

-noun

1. means of solving problems or dealing with difficult situations

Engineers and technicians

CAVCOMM employs professionals with decades of experience putting systems in venues that range in size from personal home theaters to airports and convention centers. We've put systems in beautiful sanctuaries and on the sides of buildings in Times Square. We will engineer a solution that will fit your performance requirements, your aesthetic tastes and your budget. And we can also work directly with architects, acoustical consultants, manufacturers, construction personnel, interior decorators, or anyone else working on your facility. You can be sure we will deliver an effective solution—every time.

Group
-noun

1. a number of people who work together or share certain beliefs
